

Sample LOR for Master's Program

Letter Of Recommendation

I am pleased to write this recommendation letter in support of Mr. Vikrant Mishra. I have known him since (mention year here) and taught him the subjects of Machine Learning, Computer Networks and Design and Analysis of Algorithms. Basis my observation, the impression that I formed of him was that of a meticulous student, with strong technical grasp of the concept and ability to implement theoretical knowledge proficiently.

Academically, he is among the top students of the class and secured good marks throughout the coursework. An inquisitive individual, he takes keen interest in learning new concepts and has the potential to assimilate his learning constructively with minimum guidance. His passion for Databases is evident in the career related discussion that we had and going by the clarity of purpose that I noticed he seems resolute and is poised to realize his ambitions. Complementing his believe in holistic development aptly, he has participated in various technical events, represented the college in an intra-state quiz competition, "TCS Tech Byte Quiz" and was among the top ranked participants (secured third rank). Also, as the member of organizing committee he was involved in conducting the college technical festival and even assisted the team in approaching corporate to join the event as sponsors.

I have mentored him on a project titled, "Hit or Flop" based on an idea to make prediction around the success of a movie at box office. For this project, his approach of studying the requirements in detail helped him in assessing the overall objectives to be achieved and whenever faced with any issue he adapted the strategy of breaking down the problem in simpler steps and then resolving it one step at a time. Another striking feature of his performance was the background research he conducted even before he commenced with the actual work. Determined to explore all the probable approaches relevant for the project, he conducted an extensive research and went through numerous research papers. Moreover, while leading his team, he was focused on getting full involvement of his team members and at the same time complemented his team's strengths to ensure timely completion of the deliverable.

I think this course would benefit him with acquiring relevant technical knowledge and skills, contribute to his professional development and propel his career in the right direction. Hence, I strongly recommend his application.
