

Sample LOR for Master's Program

Letter Of Recommendation

I am glad to know that Mr. Vikram Kapoor has decided to pursue further studies at an international level and it makes me extremely proud to write this recommendation letter in his support. He is known to me since (year) in my position of Assistant Professor and I have instructed him in the subjects of Machine Learning Techniques and Security in Computing. In my opinion, he is a sincere and hardworking individual, someone very serious about his work and making consistent efforts towards precise execution.

He focuses on attaining comprehensive theoretical knowledge and one such instance in this context occurred during an assignment for Machine Learning which he did in his third year. Preparing for this assignment, he seek my advice about sources he can refer for getting clarity on a novel concept and in his quest explored beyond the prescribed curriculum. His orientation to research and the diligence with which he conducted it was astounding and especially valuable was the findings he derived. Moreover, throughout this engineering program, he has been vocal regarding his future goals and I firmly believe that with his exceptional dedication he would be able to utilize his potential to the fullest and achieve success in fulfilling his career aspirations.

Just like his affinity for academics, his participation in extra-curricular activities too is remarkable. He was the core member of a student group CEGLUG (CEG Linux Users Group), served as the Chairperson of college's ACM Student Chapter and in his capacity at these student bodies was involved in arranging diverse events of varied category. Some of the notable events that he organized were, "Software Freedom Day" in collaboration with the free software foundation TN (FSFTN), mini-hacktoberfest and computational thinking workshops. He also conducted sessions to teach basic programming and took competitive programming workshops wherein he shared his experience with his juniors and helped them in winning various national level programming competitions. Additionally, he has worked on multiple projects (Comparative study of different algorithms for Stock market prediction) and presented seminars (on genetic algorithms, security implementations of different block chain networks) related to the subjects that I taught him. During these projects, putting his analytical skills to use, he often assisted in overcoming difficult issues and came up with relevant suggestions.

I have no doubt that Vikram has the skill set and ability required for this course and I am pretty sure that it would further help him in developing professionally. I hence affirm my recommendation for him.

Dr. Aaradhya Patel
Assistant Professor
ABC University
