

## Sample LOR for Master's Program

### Letter Of Recommendation

I am writing this letter of recommendation for Ms. Priya Joshi, who is seeking admission to the Master's program at your institution. I have known her since (first/second/third/final) year of bachelor's program and instructed her in the subjects of Artificial Intelligence and Machine Learning. In our interactions, I found her incredibly passionate about knowing the latest technological development with a special interest in Machine Learning.

She truly is a machine learning enthusiast, always keen to develop in-depth knowledge of it, and puts in sincere efforts to satiate her quest for learning more. Not only does she enjoy exploring new concepts related to machine learning, but also regularly takes up relevant projects to improve her understanding of the practical aspects. Some of her initiatives in this regard includes attending a workshop on Artificial Intelligence with Machine Learning at BITS Pilani, Hyderabad, and a summer training titled, " Machine Learning for Beginners", which she completed in the academic year (mention year). Her major project named, "Network Intrusion Detection using Supervised Machine Learning and Feature Selection" too was based on machine learning and involved the classification of network traffic as malicious or benign.

In this project, she utilized SVM and ANN algorithms to find out the best fit solution with the highest accuracy and leading the team, explained various machine learning concepts to her colleagues as well. As a leader, she guided her team during knowledge transition, was willing to share her knowledge and went beyond her assigned duties did not mind helping her peers with their tasks if needed. In my capacity as the placement coordinator, I have also witnessed her brilliant performance in multiple campus interviews as she qualified the preliminary coding and aptitude assessment for all the companies she applied to. Furthermore, she was among the top ten students out of 300 students selected for the final interview with Verizon and based on her high TCS NQT score was selected for TCS Digital.

Additionally, keeping both her academics and co-curricular activities in equilibrium, she regularly participates in varied technical events and has completed many certification courses concurrently with her studies.

I feel this program will render Priya an opportunity to practice modern techniques related to her area of interest and I have no doubt that she would be successful in inculcating valuable skills taught within the structure of the course. Being in an international setting, she will gain insight into industry best practices followed across the globe and would broaden her professional network. Hence, I affirm my recommendations for her.
