

Sample LOR for Master's Program

Letter Of Recommendation

I am pleased to write this letter of recommendation for Ms. Naina Shah whom I have known via our academic interactions at ABC College, where I have taught her the subjects of Programming with C, Data Structure with C, and Integrated Development Environment. In our association of past (mention number of years) years, I have guided her through multiple academic activities and recognize her as a punctual student with an innate ability to manage time efficiently.

She was determined to do well in academics and was an ace performer in the subjects that I have taught her. The top grades she secured in my subjects (Programming with C – "A", Data Structure with C – "A+", Integrated Development Environment – "O") served as the testimony of her exemplary performance and was reflected in her consistent CGPA (9.0). Owing to her high TCS NQT score she was selected for TCS Digital and her consistent performance in academics was even awarded a merit based scholarship provide to top 5% of students of the class.

Moreover, her understanding of the fundamentals is exceptional, especially concepts of programming and she is equally competent in applying them in a competitive setup. During classes, I noticed her keen interest in upgrading her knowledge, and following my suggestion, she completed a course in python from XYZ too. Just like her conduct in the lectures, she obediently followed all the instructions I gave her in our discussions outside the class, I feel his quality of her, in particular, assists her in consistently achieving positive results.

Naina was under my supervision for a project titled, "College Management System, which was an internet-based web portal to manage college records and I have also mentored her in the practical sessions. She was interactive in these sessions and impressed me with her accurate execution and helpful nature as she often completed her tasks faster than her colleagues and then utilized her time in helping others. Furthermore, her lab work was comprehensive and she completed all her assigned tasks without making any compromise on the quality.

An otherwise academically strong student, she did enjoy exploring the non-academic aspect of a student's life and took up many co-curricular activities including a training program (Smart Interviews) imparting knowledge on the art of problem-solving.

I think a Master's program in Computer Science matches up with her unparalleled passion for the field of Machine Learning and eventually would assist her in developing a bright career. I, therefore, endorse her application for admission with financial assistance.

Mr. Siddhant Choudhary
Assistant Professor
ABC College
