

## Sample LOR for Master's Program

### Letter Of Recommendation

I am delighted to pen this recommendation letter in support of Mr. Siddharth Verma who is applying for a Master's program from (mention university name). I have known him since (mention year) in my position as the (mention designation) at the ABC College, and instructed him in the subject of Compiler Design. Basis my impression of him, I would say he is a sincere student, determined to perform to the best of his abilities in all spheres of life, and is diligent in performing even the simplest of his assigned tasks.

Academically he is a bright student, ranked among the top students of his batch and the consistent performance he has maintained throughout his engineering program makes the accomplishments even more substantial. He is eager to acquire deep subject knowledge, open to exploring new concepts beyond the realm of what is being taught in the lectures, and in his pursuit of understanding a topic better, often raises his doubts without being hesitant. His ability to question conventional answers to a problem is remarkable and is indicative of his curiosity in validating the rationale behind the explanation to develop a viewpoint of his own. The fresh perspective he presents on novel concepts contributes towards creating a lively and intellectually stimulating environment in the class, and he at the same time benefits others students by sharing his knowledge.

He was under my mentorship for IT Workshop III and a project aiming to identify high utility itemset by inputting minimum threshold in supermarkets without sending the data to the centralized server. In this group project, he enjoyed working in partnerships, and I believe due to his strong interpersonal skills managed to collaborate well within a diverse team. During the project, there were times when additional research was needed as not much information was available on a particular concept. However, responding aptly to all such situations positively, he conducted an equally extensive literature review and came to the team's rescue with his accurate findings. While I appreciated his commitment in terms of learning various novel techniques and technologies specifically for the project, I was particularly amazed to witness how he pragmatically implemented learned principles in live scenarios.

To conclude, I think this coursework is aligned with his ambitious thought process and is undoubtedly one of the best steps toward fulfilling his career goals of devising solutions to real-world problems and serving society at large. I, therefore, strongly endorse his application.

Dr. Vikrant Joshi  
(Mention Designation)
